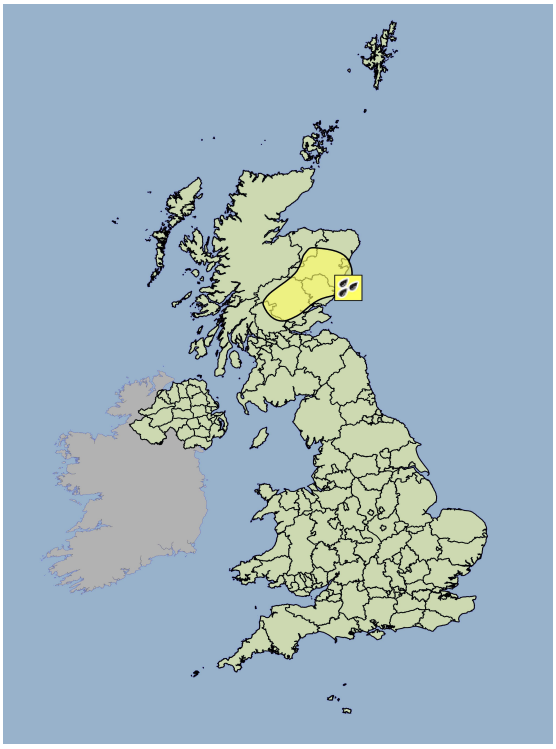
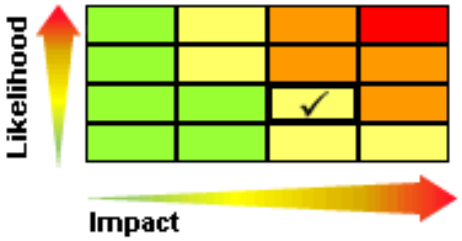
National Severe Weather Warning Service





Chief Forecasters Assessment
The slow moving frontal zone that is expected to produce large rainfall totals during Sunday and Monday, will weaken through Tuesday with rain (also hill snow) gradually becoming lighter and more intermittent. However, a further 15-25 mm of rain is possible during the first part of Tuesday.

Given the saturated nature of the ground, there is a continued risk of surface water and river flooding.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **00:05 on Tue, 05th Jan 2016** until **12:00 on Tue, 05th Jan 2016**

Further rain, locally heavy, is expected at first on Tuesday. Following the persistent and at times heavy rainfall of the preceding days, be aware of the risk of ongoing disruption from both surface water and river flooding, as well as some disruption to transport.
